

Latest news from HERU headquarters

Message from Nik

What a past few months it's been! We're set to send three HERUs out to technical evaluation, we've begun a partnership with the prestigious Manufacturing Technology Centre, launched a new website and, just recently, put the HERU under independent scrutiny from Ricardo - the results of which were far beyond our expectations. It's clear the next few months will be equally as profound, and we're looking forward to keeping you all in the loop of these exciting developments!

HERU could save each household up to 1,200kgs of carbon per year

Ricardo has undertaken a life cycle assessment of the HERU's environmental impacts compared with traditional collection methods and the results are staggering. As well as making massive carbon savings, the independent report shows how the HERU is significantly more climate-friendly than current collection methods.

Revolutionising the market with our partners

We're excited to announce the imminent departure of three HERUs, as they go out for technical evaluations. The results will inform the continued development of the HERU and, in particular, the release of the first 100 units.

In readiness for the technical evaluations, the HERU team recently spent time with the BAXI team in Preston, where together we fine-tuned the HERU, making it ready for the market.

It is through our partnerships with businesses, councils and academia, that has helped enable the HERU to continue to flourish, adapting to the needs of the market through cutting-edge innovation and business acumen. In a recent letter of support, BAXI stated, "we are very excited by the potential of the HERU unit to revolutionise certain areas of the market." You too can join our partnership by contacting us [here](#).

New website launched

We're proud to say that our new website is live. It was designed to reflect the latest phase of the HERU and we'd love for you to view and let us know what you think.

MTC partnership

In a significant step in the HERU's development, we've partnered with the Manufacturing Technology Centre to prepare for market-readiness.
