

Latest news from HERU headquarters

Message from Nik

This quarter we continue to work closely with our partners and early adopters, progressing towards our 2020 planned production.

A key part of this process is our exciting new partnership with James Clark Technologies, who will be developing and manufacturing the commercial HERU units, for planned delivery Q3 of 2020.

We were back on the BBC last month too, one year on from their original report. David and his team have been following our progress throughout the year and we would like to take this opportunity to thank reporter David Gregory-Kumar, for his continued support in spreading the word on the HERU.

And finally, we have been catching up with the team at Wychavon District Council where the HERU is being trialed at the Civic Centre to turn resources into energy. The team has been providing some great feedback in respect of HERU's usability.

We are a team on a mission, constantly making progress and evolving our offering and I can't tell you how proud I am to see the leaps and bounds forward we are making in bringing this game-changing product to mass-market.

We would love to hear from you if you have any questions or comments on the HERU. Just [click here](#) to get in touch.

Kind Regards,
Nik

Wychavon Civic Centre Kitchen's First Month with HERU

We have always had the end user in mind when designing the HERU, and now that it is being operated in a real-world situation we were keen to catch up with the team at Wychavon District Council (who have been using the HERU for over a month).

Vic Allison, Deputy Managing Director at Wychavon, said:

"The HERU is extremely easy to use and has left the bin in our café virtually empty as we are now making the most of the HERU. The team are really happy using it and it's even better knowing that we are not contributing to landfill. We're very pleased to support this local business and hope that this trial will help to take the HERU to the next level."

James Clark Technologies to develop and manufacture the commercial HERU by 2020

The HERU team are delighted to announce that a licence agreement has been established with James Clark Technologies. CEO of JCT, Tristan Carmichael comes with a wealth of experience in the heating and electronic controls industry, having been both Product Manager and Project Leader at BOSCH Thermotechnik GmbH for over 10 years.

We welcomed back the BBC to see HERU one- year on and witness the transition from lab to Wychavon District Council's civic centre

One year since his original report on HERU, David Gregory-Kumar from BBC Midlands Today visited Wychavon District Council to take a look at how HERU is transforming their café resources into energy.

David has followed the progress of HERU and watched as it has developed from a prototype to a product with genuine applications.
